Annual Bull Production Sale

Tuesday, March 25, 2025 - 1:00 PM

Frenzen Sales Pavilion

4 1/2 miles North of Fullerton on Hwy 14 Fullerton, Nebraska

49125 NE-14 Fullerton, NE 68638

Sale Day Phone Galen: 308-550-0237 or Eric: 308-550-0238

The auction can be viewed on DVAuction. Visit www.DVAuction.com to register. You can bid real time with live audio/video. DVAuction also offers proxy bidding. For questions, call (308) 520-5084. You will need high speed internet and need to register more than 24 hours in advance.

Free Delivery in Nebraska, or bring your trailer Sale Day and Save \$50 Per Bull Lot or \$25 Per Heifer Lot or receive free board until April 1.

Complimentary Lunch Sale Day

TERMS, CONDITIONS AND GUARANTEE:The Frenzens guarantee our bulls to be sound, fertile, reproductive and will sell under the terms and conditions of the American Angus Association and the American Hereford Association. If any problems arise with your bull, during the first breeding season, let us know right away and we will make adjustments reflective of the situation.

FERTILITY:All bulls selling have been fertility tested and scrotal measured by our veterinarian, Dr. Lance Kurz and Dr. Kara Hohenstein, and will be accompanied by proper certificates. All bulls are guaranteed breeders. Any of the younger bulls that have not passed a semen test and the vet feels will be qualified breeders, will be kept here until they pass the semen test.

HERD HEALTH: All cattle have been vaccinated for 7-way, Blackleg, Haemophilus, IBR, P13, BVD, Pasturella, BRSV, foot rot shot, Vibrio, Lepto, treated for internal and external parasites and received a magnet. They have been poured for lice again this spring. All registered animals are free by test or predigree of genetic defects unless noted in the catalog.

Complimentary lunch will be provided.

Please bring this catalog with you sale day!

Auctioneer: Tracy Harl.....(402)469-3852

Hosts Welcome

GALEN FRENZEN FAMILY ANGUS AND POLLED HEREFORDS FULLERTON, NE

Friends:

Wow! What a great time to be in the cattle business. Record prices in every phase of the industry. Now is the time to weigh up your old bulls and invest in new herd sires and new genetics.

When you invest in a bull, you are investing in a genetic package. That package is the same irregardless of how it is "wrapped". At Frenzen's we develop our bulls in a sound, hard muscled, athletic package that is full of performance and cow power. You won't have to "let these bulls down" to get into breeding condition or pass a semen test. This is a no creep survival of the fittest operation. We use a natural selection process for fertility in our females. It's goodbye to opens no matter the pedigree or numbers.

We are doing something different this year. All the bulls in their different age groups have been running on corn stalks. This adds more roughage to our already low Megacal ration but ensures exercise, mobility and hard condition. These are not dry lot developed bulls!

Thank you in advance for your participation and confidence in our program.

Thanks,

Galen E. Frenzen

Galen's Cell: 308/550-0237

Eric's Cell: 308/550-0238

Our Mission Statement:

"To Produce thick, stout-made, sound, functional cattle that produce and reproduce on a minimum of input and whose offspring, when fed out, will be efficient, fast gaining and have Choice or better carcasses. Also to provide our customers with accurate information and the best service possible.

Galen and Gwen: Older, slower but still going. Gwen has been picking up alot of slack for Galen. Shoulder replaced and side effects from an emergency appendectomy. That was nasty!

Genna, Kiera & Kinsley: Genna keeps busy coaching Kinsley's softball & volleyball plus helping with the girl's show cattle. Helps alot with the cattie operation here. Kiera did well showing her heifers this summer and fall. Spends time with her dad in Colorado. Kinsley does her thing. Likes sports, showing, working wither cattle and socializing.

Tessa, Cody, Austr, Clint and Cash: No dull moments here. House is a work in progress. Cody keeps busy with his job. Tessa works part-time, keeps the household functioning and keeping track of everyone. Austr is busy with all her projects and activities. She has taken up wrestling! Clint and cash are busy "farming" and self inspired projects.

Eric: Not much changed. Dedicated to this place, his "Football Kids" and still involved with Teammates. Get's away once in awhile for some R&R and enjoys his nieces and nephews.

Family.....Cattle.....Country

American Angus Association

Selection Tools

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

Combined Value (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

Retained Interest Bulls:

These are bulls we would like to "keep our fingers on". We may want to collect semen on them - at the buyer's convenience and our expense. If the buyer's calving season differs from ours, we may want to use the bull naturally if the buyer agrees. The buyer will get full salvage value of the bull.

All cattle were bred, born, raised and developed at the Frenzen's by the Frenzen's.

What EPD's Don't Measure:

Libito

Age @ Puberty

Structural Integrity

Freedom of Movement

Effects of Fetal Programming

Mothering Ability

Calf Vigor

Eye Appeal

ANGUSGS
Powered by Neogen GeneSeek

Committed To The Angus Breed.

As the world's largest genotyping lab, NEOGEN provides genomic solutions to cattle producers from seedstock to commercial cow-calf, with the goal of assisting breeders in making the most of their selection decisions.

How Do I Order?

- Order DNA tests using your AAA Login account.
- Or call AGI at (816) 383-5100

ANGUS. BETTER THAN EVER.

22,000 NEW SNP MARKERS

Novel Content on Angus GS

- 7,800 SNPs from sequence that is novel to arrays
- 4,000 SNPs from GGP F-250 research array

Global Research

- Latest findings on genes influencing:
 - Fertility – fertility haplotypes identified by AGI are included in Angus GS as well as SNP related to heifer pregnancy in Angus data
 - Feed efficiency
 - Marbling
 - Calving ease
 - Vaccine response

Angus GS V2 SNP Count by Chromosome

FOR ANGUS. BY ANGUS.

ANGUSGS
Powered by Neogen GeneSeek

“Angus’s database of the whole genome sequence was leveraged with help from experts in the field to identify approximately 2,500 variants that are the most likely having a large effect in Angus cattle.”

Stephen Miller
Director of Genetic Research AGI

“The power of Angus GS, when weighed with keen phenotypic selection, far outweighs any other options to advance the breed as quickly as needed in today’s marketplace.”

John Teixeira
Owner, Teixeira Cattle Co.

Yearling Angus Bulls

These Yearling Bulls were raised by their dams on pasture and have seen no creep. All the yearling bulls (Angus and Polled Hereford) have been running together on irrigated corn stalks and fed a growing ration. Their ration consists of modified wet distillers, ground straw, dry land corn silage and a mineral supplement. This extremely low starch diet keeps them sound in their feet and joints, hard muscled and athletic. Running on corn stalks gives them plenty of exercise and extra roughage. They are not dry lot developed. They may not be as heavy and fat as others - but they won't melt away this summer and will have extra years of service. Remember you're investing in a genetic package irregardless of how it is wrapped. Semen Evaluation and Scrotal Measurements (2-24-2025)

Connealy Craftsman
20132505 ~ 11/13/2020 **Ref Sire**

Lots 1-4 are flush brothers out of the popular Connealy Craftsman sire and the great B103 donor cow. A flush sister sells as lot 93 and a maternal brother sells as lot 46.

Fall Yearling Angus Bulls

This is a strong set of sound, hard muscled, athletic bulls packed with performance and cow power. They were weaned in January and ran on grass this past summer. After harvest they were kicked out on irrigated corn stalks, had free choice alfalfa hay and the low starch ration of distillers, ground straw and dryland corn silage. They are ready to go to work.

-This bull is a result of an old flush done years ago. His donor dam was born in 2001 and had a WW ratio of 12@107 and a YW ratio of 9@106. Don't discredit him for his subpar EPD's. Timeless genetics.

DVAuction

Broadcasting Real-Time Auctions

Watch and Bid Online at DVAuction.com

Can't make the sale?

We are pleased to bring you real-time Internet bidding and a live broadcast of this sale through DVAuction. To watch or bid online, simply complete the following steps:

- Visit the DVAuction website at DVAuction.com
- Click on the "Create New Account" tab
- Enter a user name, password and your contact information
- Complete the Banking information. (If you are only interesting in viewing you can skip this section)
- Select your Time Zone, Accept the Terms and Conditions and click "Create Account"
- Complete the process by answering a few questions, selecting your subscription choices
- Click on "Apply for Bidding" in the upper left corner of your screen to select the sales you wish to bid on
- Be sure to include a personal contact at your bank, we will contact them in order to get a credit reference
- If you would prefer to be approved using your credit card, call (402) 316-5460
- Please be sure to apply for bidding at least a day in advance of the sale-every effort will be made to process your application in a timely manner.

DVAuction will contact you once you have been approved to bid. We do not provide buyer numbers until you have purchased a lot in the sale, and that number is only usable for that auction. After the sale contact the sale owner or manager to make arrangements for payment and delivery of your online purchases.

Please Note: High speed Internet access(DSL, T-1, or Broadband) is required to be able to bid successfully during the sale. If you have any questions, please contact DVAuction at (402) 316-5460 or email support@dvauction.com.

Proxy Bidding: If you can't access a computer during the sale, you can now place a "proxy bid" through DVAuction. Simply follow the instructions listed above, and as the sale date nears there will be a "Proxy Bidding" link under the sale listing on the main page of DVAuction. You can then place the maximum amount that you'd like to bid, and our system will represent your bid just as if you were there.

All cattle will go through the sale ring.

This bull jumps heifer value, not fences

No doubt about it, Hereford-sired baldie heifers demand a higher selling price and grow into more profitable cows. Hereford bulls provide the industry-leading maternal instinct and are known for their high fertility. Plus, their docile nature means they're happy staying on your side of the fence.

Hereford — *gentle bulls* **making black better.**

HEREFORD SELECTION TOOLS

Calving Ease Direct (CE) is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW) is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW) is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW) is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Scrotal Circumference (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Maternal Milk (MM) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Carcass Weight (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Marbling (MARB) EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better- muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Rib Fat (FAT) reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

Udder suspension (UDDR) are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT) EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Baldie Maternal Index (BMI\$) is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Certified Hereford Beef Index (CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

AHA GE·EPD

The Power of Genomically Enhanced EPDs

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. Below is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Polled Hereford Yearling Bulls

These Yearling Bulls were raised by their dams on pasture and have seen no creep. All the yearling bulls (Angus and Polled Hereford) have been running together on irrigated corn stalks and fed a growing ration. Their ration consists of modified wet distillers, ground straw, dry land corn silage and a mineral supplement. This extremely low starch diet keeps them sound in their feet and joints, hard muscled and athletic. Running on corn stalks gives them plenty of exercise and extra roughage. They are not dry lot developed. They may not be as heavy and fat as others - but they won't melt away this summer and will have extra years of service. Remember you're investing in a genetic package irregardless of how it is wrapped. Semen Evaluation and Scrotal Measurements (2-24-2025)

Lots 74-76 were members of the girls' Denver Pen of 3. They are all out of their old show heifers and were raised by them. They are highly maternal with positive carcass traits and with extra muscle and eye appeal. Lot 75 and his mother were named Champion Bred & Owned Pair at the 2024 JNHE as well as Reserve Supreme Female at the Nebraska State Fair Open Jr Show and Supreme Champion Pair at the Nebraska State Fair Open Show.

Fall Yearling Polled Hereford Bulls

This is a strong set of sound, hard muscled, athletic bulls packed with performance and cow power. They were weaned in January and ran on grass this past summer. After harvest they were kicked out on irrigated corn stalks, had free choice alfalfa hay and the low starch ration of distillers, ground straw and dryland corn silage. They are ready to go to work.

2 Year Old Polled Hereford Bulls

Not left overs, but held back for the sale. They were hay fed last summer and then kicked out on dryland corn stalks after harvest plus access to our low starch ration of modified wet distillers, ground straw and dryland corn silage.

Angus and Polled Hereford Yearling Heifers

This is an outstanding group of heifers. Every one was selected with the ultimate goal of developing into a top producing Brood Cow. Several have the potential for being competitive show heifers. These heifers have seen No Creep, have received two doses of Pfizer's Bovi-Shield Gold FP VL5, are Bangs vaccinated and have received a magnet. Since weaning, they have been running in a large trap and received a ration designed to express their genetic growth, yet keep them sound and functional. Our cows run on 10 different pastures and have a wide range of quality and quantity of grass resulting in a wide range of weaning weights. Don't discount an individual if you feel the weaning weight is sub par. The big, fat heifers at weaning time don't always bring in the best calves as cows. They have seen no creep.

Angus Heifers

Lots 93-96 will sell individually and with registration papers. Lots 97-100 will sell in groups of 4. Winning bidder gets choice of any or all heifers in the group. Remaining heifers (if any) will resell as one group to the new highest bidder. Lots 97-100 sell without papers but can be transferred for an additional \$100/head

TEAMMATESSM MENTORING

Volunteer - Be a Teammates Mentor

2 Year Old Spring Calving Angus Pairs

The bred heifers are from the heart of our replacements. After preg checking they went to cornstalks where they stayed until driving them home to calve the first part of February. The only supplemental feed they had seen were lick tubs. Since then they have just been hay fed. There will be several calves on the ground by sale day. All calves have received Alpha C&D, Multimin and Tri-Shield First Defense.

2 Year Old Spring Calving Polled Hereford Pairs

The bred heifers are from the heart of our replacements. After preg checking they went to cornstalks where they stayed until driving them home to calve the first part of February. The only supplemental feed they had seen were lick tubs. Since then they have just been hay fed. There will be several calves on the ground by sale day. All calves have received Alpha C&D, Multimin and Tri-Shield First Defense.

Building healthy futures starts
with building healthy herds.

If you've ever needed more clarity on which vaccines and medications to give or exactly when to give them, Building Healthy Herds by Zoetis can help. Our interactive, easy-to-use health planning tool can give recommendations on vaccinations, dosage and even timing. It's expert-guided health management, all in your hands.

Build your plan today at BuildingHealthyHerds.com

AM I FULL OF CRAP?

Calf scours are not inevitable. A strong prevention program is non-negotiable. Dependable scour prevention is essential for calf welfare, employee morale and business profitability. The immune system's response to vaccination is variable and unpredictable. That's why giving preformed antibodies instead of relying on a vaccine to stimulate antibody production is so important. I'm all for removing uncertainties. So yes, I stand by this product. (And no, I'm not.)

Early weaned calves that demand a powerful nutritional package, meet . . .

Ignitor[®]!

When you hear "early weaned calves," you think of low feed intake and high nutritional requirements. What can you do to stimulate intake and meet these demands? Feed **Ignitor!** A program designed specifically for early weaned, light weight calves. The addition of yeast culture to improve efficiency, while supplying a complex blend of bypass protein to obtain optimum gain in young calves is the foundation of Ignitor. Ask your local ADM Alliance Nutrition supplier for more information.
